

1. Clear cache of Arduino application data by pressing cmd + space and searching/checking each of the following file paths:

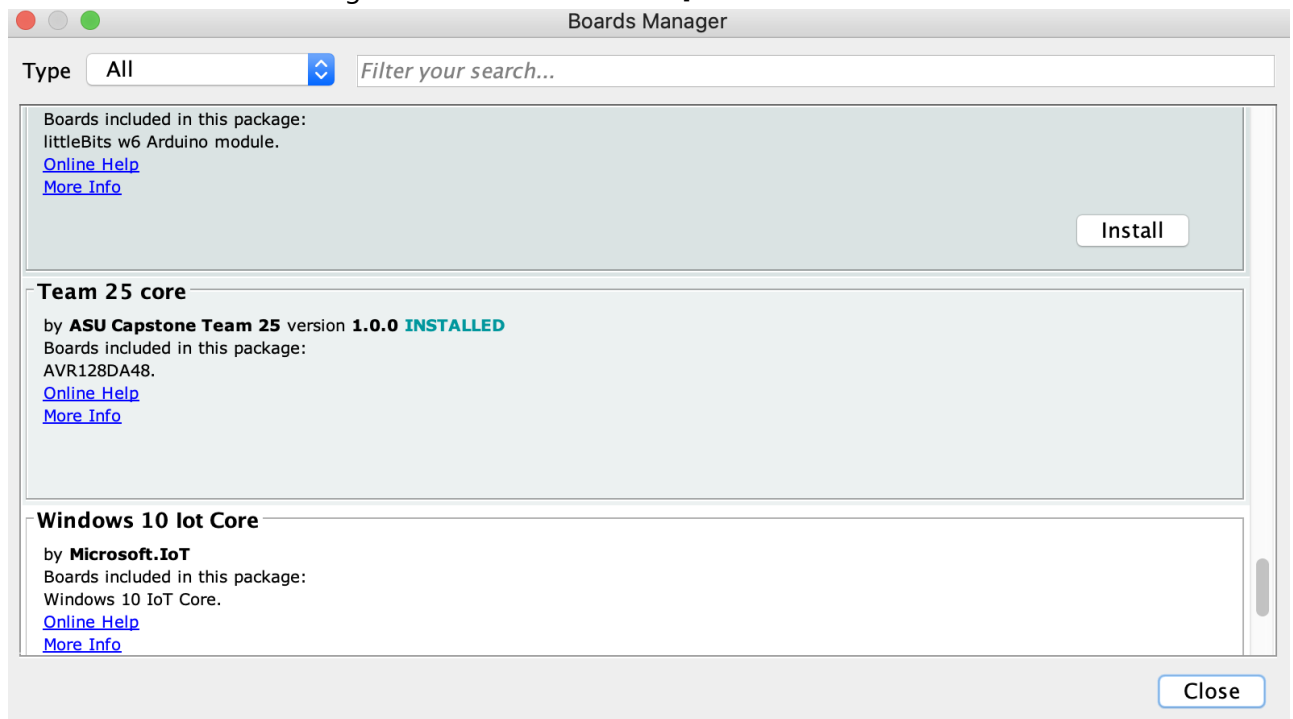

- ~/Library/Caches
- ~/Library/Application Support
- /Library/Caches
- /Library/Application Support

2. Update JSON path under file > preferences under Additional Boards Manager URL's:

[https://github.com/Emsloan/Microchip-](https://github.com/Emsloan/Microchip-DA48/raw/package_index/package_Team25Capstone_avrdude_index.json)

[DA48/raw/package_index/package_Team25Capstone_avrdude_index.json](https://github.com/Emsloan/Microchip-DA48/raw/package_index/package_Team25Capstone_avrdude_index.json)

3. Go to Tools > Boards Manager to install Team25 Core: [

]

4. Verify that it has been installed under Tools > Board > Microchip: [![[title](Images/Verify AVR_DA_Boards.png)]]
